

## Getting the Printer to Print in OS9

1. Make sure you are running a program in Classic mode or OS 9. The way to tell is to look at the apple in the left corner. If it is a rainbow of colors you are in Classic mode.
2. Go to the rainbow Apple in the left corner and pull down to Chooser.
3. Make sure that AppleTalk is active (look in the lower right hand corner of the dialog box).

4. Click on LaserWriter 8 and make sure that your printer is chosen in the list of printers that appear on the right.

5. Close the Chooser window and happy printing.
